
Allestree. 1623.

A New Almanack and Prognostication, for the yeere of our Lord God, 1623.

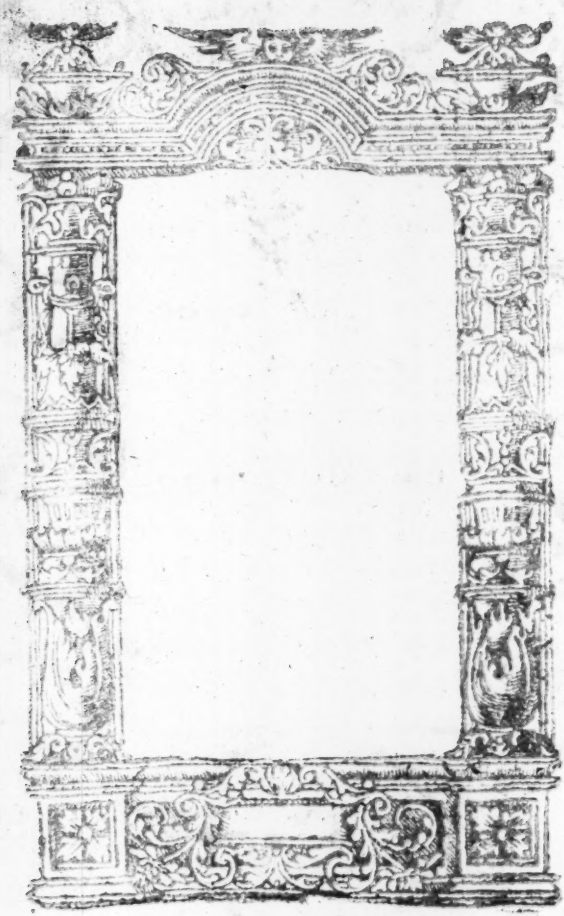
Being the 3 from Bissextil yeer

Calculated and properly referred to the longitude and sublimity of the Pole Article of the Citie of Couentree: And may serue generally for the most part of Great Brittaine.

By *Richard Allestree.*

Cum Priuilegio.

BIBLIOTHECA LAMBETHANA



The fiue Aſpects of the Planets, with their Characters, and the definition of them.

1. The Coniunction is, when two planners are both in one ſelfe-ſigne, and one ſelfe-degree: which Aſpect in Greeke is called Synodos, and is marked thus ☌. It is good with good, and with the euill it is contrarie.

2 The Sextile Aſpect, is, when two planets are diſtant one from another, betweene the centures of their own bodies, by a ſixt part of the Zodiake: that is to ſay, by two whole ſignes, or 60. degrees, which Aſpect is cald in Greek Exagonos, and is marked thus ⚹. Wherefore it is called an Aſpect of vnperfect friendſhip.

3. The Quadrile Aſpect, is when two planets are diſtant the one from the other three whole ſignes, or 90 Degrees of the Zodiake: and is called in Greeke Tetragonos, and is marked thus □. Therefore it is the Aſpect of vnperfect enmitie.

4. The Trine Aſpect, is when two planets are diſtant the one from the other by foure whole ſignes, or 120. degrees of the Zodiake, and is called in Greeke Trigonos, & is marked thus △. Therefore it is an Aſpect of perfect loue and amity.

5. The Oppoſition, is when two planets are right oppoſite the one to the other and are diſtant the one from the other by ſix whole ſigns, or 180. degrees of the Zodiake, and it is called in Greeke Diametros, marked thus ☍. Therefore it is called an Aſpect of perfect enmity or hatred, as it hath bene ſpecified by ancient and skilfull Aſtrologers.

A perfect Table of the foure Tearmes and their Returns, with the Essoyne dayes, dayes of Exception, Returna Brevium, dayes of apparance fitting this year, 1623.

Hillary tearme begins Ianu. 23. ends Febr. 12

Returne dayes, or dales of Essoyne	Dayes of Exception.	*Returna Brevium.*	Dayes of Apparance
Octab. Hillary Ian. 20	Ianuary 21,	Ianury 22	Ianuary 23
Quind. Hillary Ian. 27	Ianuary 28	Ianuary 29	Ianuary 30
Craſt. purif. February 3	February 4	February 5	Februa. 6
Octab. purif. Febr. 9	February 10	February 11	February 12

Easter Terme begins last of April, ends May 26

Quind. paſchæ, April 28	Aprill, 28	Aprill, 29	Aprill, 30
Tres paſchæ. May 6	May 6	May 7	May 8
Menſe paſchæ May 12	May 13	May 14	May 15
Quin. paſchæ May 19	May 19	May 20	May 21
Craſti. Aſcenti. May 27	May 23	May 24	May 24

Trinity Tearme begins Iune 13. ends Iuly 2

Craſti. Trinita. June 9	June 10	June 11	June 12
Octab. Trinit. June 16	June 17	June 18	June 19
Quin. Trinit. Iu. 23	Iu. 25	June, 25	June 26

Aduent ſunday	December 1	Aduentus Dō.	Nouem. 27

Interuallum minus, or the diſtance betweene Chriſts day, and Quinquageſima, which is Shrouſunday, is viii. weekes and foure dayes.

Interuallum maius, or the diſtance betweene Trinity ſunday and Aduent ſunday, is 24. weekes.

Since his Maieſties Coronation in Scotl.	29. Iulij	57
Since his happy comming to London	7. of May	21

Veneris ſtella à Græcis *Phosphoros* & *Eſperos*, à noſtris Lucifer ac veſper vel veſperugo nuncupatur.

This golden Planet Venus is Orientall, from the beginning of this yeare vnto the 14: day of Februarie, ſhe is till then our bright morning ſtar before ſun riſing, and therefore called Lucifer. On the 14 day of February aforeſaid, ſhe beginneth to be Occidentall or our glittering euening ſtar, ſetting after the going down of the ſunne, & therof termed Veſperus, that is the euening ſtar, during the reſidue of this yeare, 1623

The parts of mans body, which the Planets doe signifie of themselues.

Saturnus	Iupiter.	Mars.	Sol
Spleene, Right Eare, Bladder, and Bones.	Lungs, Ribs Liuer, Gristles, Hæde, Arteries.	Gall. reynes, Left eare, Veines, and Stones.	Sight, Heart, right side, marrow, sinnewes, right eye viri ♂ et ♀.
Venus	Mercurius	Luna.	
Kidneies, sperme. fatnesse, buttockes, genitals, matrixe, pappes, and throate.	Memory, Tongue, Hands, phantasie, Mouth, Sinewes, And thankes	Left eye viri, right mulieris. stomache, Left side, Brest, womb-port, and Taste.	The secrets of both sex.

The 12 signs are thus charactred.	Aries ♈	Taurus ♉	Gemini ♊	Cancer ♋	Leo ♌	Virgo ♍
	Libra ♎	Scor ♏	Sagitar. ♐	Capric. ♑	Aquar. ♒	Pisces. ♓
The Plan. thus, with the dragons head & taile.	Saturne ♄	Iupiter ♃	Mars ♂	Sol ☉	Venus ♀	
	Mercurie ☿	Luna. ☽	Caput drac. ☊		Cauda dra. ☋	
The Aspects thus,	Coniunctio ☌	Sextilis. ⚹	Quadr. □	Trinus. △	Oppositi ☍	

Now if there be any so ignorant or superstitious a person, that saith or beleeueth, that these Characters being written or made vpon any thing, one doth either vse witchraft, sorcery, or any damnable meanes, they are lyars, for it is but as Brachygraphy to writing at length.

Memorandum: there will be seene a marueilous Eclipse of the Moone this yeare the fift of Aprill, through which many shall be the worse: for many shall finde neither siluer nor gold it shall be so darke within their purse.

The Anathomy of mans body, as the part are Heathenishly at tributed to the 12. signes of the Zodiaque.

Aries, the Head and face.

Taurus, Necke and Throate.

Gemini, Armes and Shoulders.

Cancer, Brest, Stomache, and Ribs.

Leo, Hart & backe

Virgo, Bowels and Belly.

Libra, Reines and Loynes

Scorpio, Secrets

Sagitarius Thighes.

Capricornus The Knees.

Aquarius The Legges

Pisces The Fete.

In the 7. or last Columne of this my Almanacke toward the right hand, you haue the houre and minute of the Sunne-rising for euery day in the yeare, which houres and min. are halfe the length of the same night. For example: the 8. of Jan. the Sun riseth at 8. of the clocke, which being doubled, maketh 16. houres and no min. the length of that night. And to know the time of the Sun-setting through the yeare, take the houres and minutes found in the Almanacke for sun-rising, from 12. and you shal haue the Sun setting left: which being doubled, is the length of the day. Example: January the 8. day aforenamed, the sun riseth at 8. and no minutes: take 8. from 12. and there resteth 4. the houre of sunne set that day: 4. being doubled, maketh 8. hours, the length of that day, and so of all the rest. This is very easie.

A PROGNOSTICATION FOR THIS PRESENT YEARE OF GRACE. 1623.

Collected by RI. ALLESTREE, Contemplator in *Siderali Scientia*, and louer of Truth.

Resides super æthere, cuncta Rex Deus gubernat.

LONDON.
Printed for the Company of Stationers.
Cum Priuilegio.

Euphemiſmus, *or* boni omnis captatio. *Aſtronomicall calculations for this preſent yeare* 1623.

THe true or apparant greatneſſe of the Tropicall yeere, is 365. dayes, 5. houres, 5. ſcrupt 55. 35. 30.

And in this time the Sun doth finiſh his courſe through the 12. ſignes of the Zodiaque: and this Tropicall yeare, beginneth when the Sun entereth into the firſt ſcruple of the Dodecatemory of the Imaginary ſigne Aries.

A day large or naturall, is 24. houres long. A day ſtrict or civill, is 12. houres long: Iohn 11. 9. Are there not 12. houres in the day: beginning at Sun-riſing on our Horizon, and ending when the Sunne is gone off. The Hebrewes reckon the naturall day from Euening to Euening, the Romanes, from Midnight, the Athenians beginne at Sunne ſet, the Babylonians at Sunne riſing, the Vmbrians and Aſtronomers at midday.

Looke for the Auge or abſis ſumma, of all the five Planets, in my Prognoſtication 1620. ſet downe after Copernicus: and you haue both the Auge and the oppoſite Auge, vacuus curſus, and the time of the Moone, being Sauage, noted with the afore ſayd words (Apog. Vac: curſ, Sauage) in euerie moneth in this Almanacke for this yeare: and theſe paſſions or rather debilities Accidentall of the Moone, be of great value if there be truth in Aſtrology: alſo, you haue the aſpect of the Planets with the Moone, as they fall for euery day in the moneth.

The true proceſſion of the Aequinoctial, is 28. de-

grees, 10. minutes, 25. 3. thirds, 44. fourths.

The greatest obliquitie of the Zodiaque, by the Prutenicall Tables, is 23. degrees, 28. minutes, 1. sec. 7.

Of the Eclipses this present yeere 1623.

FOure Eclipses happeneth in this yeere of grace, in the two great lights of heauen: that is, two of the Sunne, the eye of the world, and naturall nourisher of all sensible and vegetable creatures; And two of the Moone, the Lady of the night: Ipsa est Regina & gubernatrix noctis: of the which, the first Eclipse of the Moone will bee visible in nostro Horizonte: or in our Horizon, and all the rest extra nostrum Horizontem conspicientur, or not to bee seene in England.

The first Eclipse of the moone will shew it selfe vnto vs (if the thicknesse of the ayre hinder not) the 5. day of Aprill in the Iulian or English yeere, but the 15. of the same by the Lilian or Romane accompt. And the beginning of this partiall Eclipse of the moone, is to bee seene at Couentry, 30. minutes after 2. a clocke in the morning, the middle or true opposition at 4. a clocke and 5. minutes, and the end at 5 and 41. min. The true motion of the Sunne is then in the 24. degree and 55. min. Arietis: the moones motion in the opposite degrees and minutes to him in Libra, hard by Anabibazon or the Dragons head. The Ecliptical digits will bee very neere 11. digits. Shee will bee almost all blacke, the latitude of the moone at the beginning of the Eclipse will bee 32. min. and 40. sec. and at the end 22. min. 25. sec. Meridionall ascending to the Ecliptick, so that all that part of the body of the moone that is blacke at her greatest obscuritie, will be on her nether side towards the earth. The Meridian of this great Eclipse will be distant from vs towards the West 4. houres and 6. minutes.

Saturne is retrograde from the beginning of the yeere, to the 21. day of March, and from the 20. of November to the yeeres end: and all the rest of the yeere is Direct.

Iupi-

Iupiter is Retrograde from the beginning of this yeer vnto the 22. of March, and from the 7. day of December vnto the end of this yeere; all the rest is Direct.

Mars is Retrograde from the 25 day of May vnto the 26. of July, & all the rest of the yeere he is Direct.

Venus is retrograde from the 11. day of November vnto the 22. of December; that is all the rest of the yeere else Direct.

Mercurie is Retrograde from the 16. of March vnto the 11 of Aprill, from the 15. of July, to the 6. of August, from the 7. of Nouember, to the 29. of the same moneth: all the rest of the yeere he is Direct.

Note that Easter day will fall vpon the Lady day, or 25. day of March, Anno 1627. the like was not seene this foure score and one yeeres. Also it doth the like Anno 1649. 22. yeeres after that againe: the like hath not beene seene but 7. times since William the Conquerour, Anno 1066.

There will be a Coniunction of Saturne and Iupiter, the 9. day of July this yeere: it will bee in the 6. degree and 44. minutes of the hot and dry signe Leo, in the fiery Triangularity, and soone after Sunne rise. And although, Corporalis congressus, coitus or coniunctio, and especially these two Planets Infortunium maius, and Fortuna maior, which are termed thus of the Astrologers, both of them singular in their owne kinds, being alwayes of more power, strength, force and efficacie, then any aspect: For as Stæflerinus writeth in his 12. Proposition: In a Coniunction, the Starre beames are thickest, because they are all vnited together: And Hermes himselfe, saith, An aspect cannot diminish the signification of a Coniunction, but a Coniunction diminisheth the signification of an Aspect. And I know the Starres and their Aspects are no sole or selfe-working efficient causes of any accidentall thing in this world: And also you know the Prouerbe: Non mentiuntur Astra, at ipse ni ubi; An Astrologer is no Prophet.

A Discription of the foure Quarters of this yeere, 1623.

Temporibus veris modicum prandere iuberis,
Sed calor æstatis dapibus nocet immoderatis,
Autumni fructus caueas ne sint tibi luctus,
De mensa sume quantum vis tempore brumæ.

THe Hyemall Solsticiall, or winter quarter, (according to Astronomie) entred the last yeare 1622. the 12. day of December, very timely in the morning, (but more naturally in this our Northerne climat, about the midst of Nouember) at what time the Sunne entred into the first minute of the imaginary cold and dry signe Capricorne, being then declined from the Aequinoctiall, according to the obseruation of Tycho de Brache 23 degrees 31 minutes, 30 seconds Southwards, at which time the dayes bee at the shortest, and nights at longest, in all our yeere, in this time raines and moystures doe increase, then meates and drinkes naturally would be vsed very hot with moderation; also to drinke moderately wine without alay.

The Spring Quarter.

THe tenth day of March, about 8 a clocke at night, beginneth (saith the Astronomer) our Aequinoctium vernum, at which time the daies & nights are of equall length throughout the whole world (but our Spring time more naturally and truely beginneth the 8. or 9. day of February) at what time sweate, fleame and blood doe increase: Therefore exercise the body diligently. Gallen in Com. Aph. 18. Lib. 1. saith: Meate would bee taken lesse in quantity now then in winter, and drinke somewhat more, yet alwayes prouided, drinke moderately.

Sum-

Summer Quarter.

Estas or Summer, (according to the rules of Astronomy) to ketch his beginning this yeare the 11. Day of June, at midnight: (or more naturally with vs here in this Southerne and 3 Climate, in mid May) at what time, the eye of the world is mounted to the highest point of his ascendent, or nearest to our Zenith, or Verticall point, producing the dayes here with vs vnto the longest, and nights to the shortest: hauing his ingresse into the first minute of the imaginary signe Cancer. Crescunt in sesucam herbæ, & granorum formant initia. Quia vero arborum flores in fructum abierunt, & res ex terra nascentes ad iustam tenduut magnitudinem. And the Sunne doth come to the hot signe Leo, meeting in the same Asterisme, two hot Starres named Syrius and Procyon. Therefore this quarter the inward heate of the body is but little, and the stomacke doth not digest so strongly, nor quickly as in winter: wherefore in this season eating often, and a little at once, is most conuenient.

Autumne or Haruest Quarter.

Sol est lumen & candela Cœli gubernator mundi; Haly comming to the Autumnall Aequinoctiall point, or first minute of the imaginary signe Libra, beginning our second spring or Autumne quarter, making againe the daies and nights with vs of an equall length, beginneth (according to Astronomy) the 13. day of September, almost 3. a clocke after noone, (or more naturally, about the midst of August with vs) quam eris constitutionem promouent occasus matutini Pleiadũ, Hyadum, & Orionis. Therefore this season of the yeare by nature is variable, and the ayre changeable, by occasion whereof, ensueth sundry sicknesses, blood decreaseth, & melancholy aboundeth: wherefore all summer fruites would now be eschewed, for as much as they make ill iuice or blood, and winds in the body.

Qui sapit, ille animum fortunæ præparat omni,
Præuisumque potest arte leuare malum.

Vult

Vult enim Deus aliquam in hominum mentibus luxem esse reliquam, notitias numerum, figurarum, legum naturæ, physicas multas.

Times, or generall rules of Husbandry, and *Gardening*, *superstitiously attributed to* the Moone in the 12. Signes of *the Zodiaque.*

He that obserueth the wind, shall not sow, and he that regardeth the clouds, shall not reape: As thou knowest not which is the way of the Spirit, nor how the bones do grow in the wombe of her that is with child: so thou knowest not the worke of God that worketh it. In the morning sow thy seede, and in the euening let not thine hand rest: for thou knowest not whether shall prosper, this or that, or whether both shall be alike good.

BVt the Ethnicks and Astrologers say, First before you plant or graft, &c. consider the winde, for if it be in the South or East, it is perilous, the premisses considered, plant and graft, when the Moone is increasing in Tauro or Aquario.

Good to sow or set all kind of corne and seedes the Moone in Ariete, Cancro, Virgine, Libra, or Capricorno, if she extra impedimentum: If you sow in moyst ground, or the nature of your seedes be moyst, the time is aptest after the full Moone; if it bee dry, it is better in the increase: But the seedes whose rootes be round, must bee sowne (as Onions, and Cabbages, or Turneps, &c.) three or foure dayes before or after the full. Gather Apples and other fruits, herbes, and flowers, to haue them in most beauty, and greatest vertue, the moone at the full. Sow or set Garlicke, Lettice, Parsnips, Carrets, pease and Beanes, two or three dayes before or after the full moone. Sow seedes or herbes for store, in the increase, from Februarie. vnto June. Good to lib or geld Cattell, the moone increasing, in Ariete, Sagitario, or Capricorno. Good to fell Timber for building, in the wane of the moone, for the auoyding of wormes, from mid-

midſummer vntill Ianuary. Good to plaſh headges, fell wood to burne, that the ſtocke may the better grow againe, the Moone increaſing in Ariete, or Libra. Cut Vines in February or September, the Moone in Ariete, Libra, or Scorpione. Remoue trees in the ſame ſignes, all the laſt quarter, in Nouember, September, or February. Dung your land that the weedes may not abound, in the laſt quarter. Sheare ſheepe in the increaſe: and in the ſame time cut your hayre to grow the ſooner. Kill fat Swine at the full of the Moone, for the fat, the better to endure the boyling.

Solis & Lunæ Eclipſis, ſpem fructus eludit: Although Aſtrologians affirme this by their Art, yet the Eclipſis of the Sun and Moone, are neuer ſole or alone-working efficient cauſes, that Corne or Trees, which are lowed or ſet when the Luminaries are eclipſed, neuer proſpereth, or commeth to good. Good for abiactious or weaning of Children about the full: the moone voyde of courſe. for them to forget the pap or Nurſe. Good to deſtroy cornes, hayre, wennes, warts, and to pare the nailes: cut them in the laſt quarter of the moone, and ſhe in conjunction quartile or oppoſition with Saturne or Mars noted in my Almanacke thus: ☌ ♄ ☽. ☐ ♄ ☽ ☍ ♄ ☽. ☌ ♂ ☽ ☐ ♂ ☽. I know and doe beleeue, (I thanke God) that no harme ſhall come per fortunam or chance, to the children of God: for hee will ſo guide and rule them by his prouidence, that neither man, ſtarres, nor Deuill can hurt them, though in this world they may ſeeme to hurt them: Therefore, for my part, I attribute nothing to the time, but all honor to God that made the time: whoſe glory and power is to be extolled aboue all Heathen gods.

Of the foure humors in Mans body, and certaine Phyſicall Obſeruations.

Quatuor humores in humano corpore conſtant:
Sanguis cum cholera, flegma, melancholiaque,
Terra melan, aqua fleg, & aer ſanguis, cholor igni.

VVHich if they exceed or alter that proportion that God created them in the beginning (either in quality or quantity) then ſhortly happeneth ſick-

diseases and sicknesses. Now for Phlebotomy and purging, when the weather is extreame hot and cold, it is not good, vnlesse that some great necessity doe require it. And therefore Hippocrates part 6. and 6. Aphorif. saith, That the Spring and Autumne are more conuenient to take Physicke in, then Summer and Winter. And for age, about 14. or vnder 56. yeeres, or else not. And againe, (to singe the old tune) I say there is some smattering Physitions, with others, more precise then wise, that say, no part of mans body ought to bee touched with any Chirurgicall Instrument, or Cautery, actuall or potentiall, at what time the Heauen-gazers and Moone-prophets (I meane Astrologians) saith, the Sunne, Moone, Almuten or Lord of the Ascendent, bee in the same imaginary signe, heauenishly attributed to the part of mans body, set downe by them in the Almanacke (and chiefly forsooth, if such Planets in the Radix of their nativity had any dominion in the 6. 8. or 12. house) and in so doing, the sicke Patient may die for want of opening a veine, and so the curious and superstitious Physitian being admonished, may be a manslayer. The reason is, for the Moone abideth two dayes and more in one signe, and the Sunne 30 dayes: I say, if it be for the Pestilence, Plurisie, Esquinancie, for a continuall burning Ague, or superfluous blood, or for any extreame paine caused by heate or choller in man, (in any of all these cases) may not tarry for a chosen day of the Almanacke, because the patient might die in the meane space: but incontinently with all speede he must be let bloud, vnlesse hee bee very weake, and like to sowne. In the first and third weekes of the moone, it is best vsing externall Euacuations, as Phlebottomie, Bathes, Cupping, &c. But in the second and fourth weekes of the moone, internall Euacuations, because the very spirit and life resteth in the bloud, for that is the chiefest humour in mans body: for in Vsinis, sanguis est fundamentum caloris naturalis, in quo calor naturalis confortatur: Therefore it ought not to be let out, but vpon great occasion, and sound aduice of some learned Physitian, for otherwise it may make a way to many grieuous infirmities. In opening a veine, there be many things to bee weighed and considered: Wherefore I would not with that any man should trust to the vnlearned Chirurgion: and with all here would generally be noted, that it is not conuenient either for a very leane and weake man, or a very fat and grosse man to bee let bloud. There remaineth many mo considerations, but this lit-

tle

tle volume will not containe them: and so I conclude this point with the ancient commendation of Phlebotomie:

Blood letting cheereth sad minds, and anger pacifies,
And preserueth loue from braine-sicke fantasies.

Hippocrates defineth Physicke to be a putting to, and a taking away of such things as are wanting, or abounding in mans body: The former hereof, standeth in dieting of the body, the other in disburdening the same of corrupt and superfluous humors, which is best effected by blood-letting and purging; the best times for doing whereof (according to rules of Astronomy) are here briefly noted. The Characters here following, you shall finde written on the 3. leafe of my Almanacke.

In taking purgations, let the motion of the moone bee in watery signes, as in Cancro, Scorpione and Piscibus: and take heed also that the Moone be not in in ♈, ♉ ♌, or ♑, or ioyned to any retrograde planet (in giuing purging medicines) for they be signes of vomitting vp againe, as saith Hermes in his 74. proposition, neither aspecte of ♄, for hee by thickning and making grosse the humors, and shutting vp the powres, hindereth, (If the Lord will. Iam. 4, 15) the effect of the physicke; nor ♂, for he through his heate and drynesse oftentimes sharpneth the humors to the drawing forth of blood, if the medicine be strong.

In purging obserue.
1. The humour abounding.
2. The best way to auoyde it.
3. The strength of the patient.
4. The manner of the disease.
5. The strength and nature of the medicine to be ministred.

Purge with
Pils the ☽ in ♓, in ☌, ✱, or △, inter ♀ & ♃.
Electuaries ☽ in ♋, in a ☌ ✱, or △ ♀ & ♃.
Potions ☽ in ♋, ♏, ♓, in a ☌, ✱, △, ♀ & ♃.
Vomits ☽ in ♈, ♉ ♑, in a ☌ ✱, △, of ♀ & ☿.
Gargaris. ☽ in ♋, ♈, ♑, in a ☌, ✱, △, of ♀ & ☽.

Take
Preparatiues, the ☽ in ♊ ♎, or ♒, with a ☌, ✱, or △, between ♃ ♀ ☿.
Glisters, the ☽ in ♒ ♎ or ♏ with a ☌, ✱, or △ Inter ♀, ☿, and the moone.

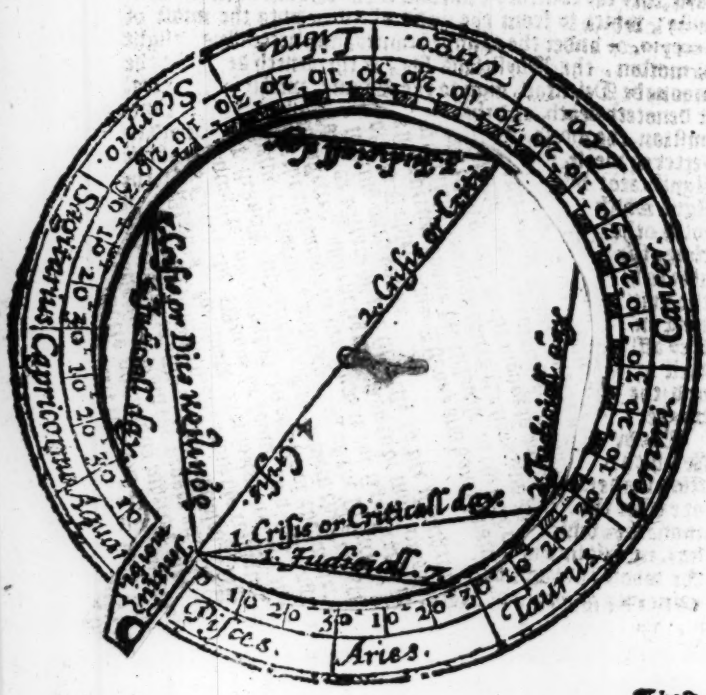
Stop Humours Fluxes, or Rheumes, the moone in ♉, ♍, or ♑ with a ☌ ✱, or △, inter ♄ ♀, or ☿.

Obserue, that medicines are better to bee giuen in the decrease

creasse or waine of the Moone, then in her increasse or fulling. Præsertim si sine malis radijs.

To enter into Bathes for hot diseases, let the moone bee in ♍. Cancro vel Piscibus, for cold diseases, in Ariete, Leone, vel Sagita. Those dayes in the which the ☽ goeth to the ☌ of ♄, are very vnwholesome (saith the Astronomer) to take a purgation in, but most fit to prouoke vomit, noted in my Almanacke thus ☌ ♄ ☽. And you must alwayes remember this: Medicus fortrum requirit, that is, where the Physitian is not paid, the disease goeth backwards.

A Table composed according to the saying of Ptholomeus in the 60. Aphorisme of his Centiloquium, wherein he saith the Physitian must behold the Moone as she passeth through the Criticall, Iudiciall dayes, at what time the Patient first felt his sickenesse, or the question first moued for the sicke-



Those

THoſe dayes are called Critticall dayes of the Phyſitians, when the Moone doth abide or reſt in ſignes and degrees which bee diſtant either in a Quartil, or in an oppoſite Aſpect of the world, from the part of the Zodiaque, in which ſhe was in the beginning of the ſickneſſe, (marked in my Almanacke thus, ☌, and thus, ☍,) neuertheleſſe the Moone commeth to theſe beames or degrees, now more ſwift, now more ſlow: becauſe of her ſwiftneſſe and ſlowneſſe in her Auge and oppoſite Auge (as I noted vnto you in my Prognoſtication Anno 1620.) Yea, and for theſe cauſes it may well ſeeme to happen, and that not without reaſon, that the Criſes doe alter their times and are not the ſame day and houre alwayes, but doe differ in themſelues. If the ☽ be in a Critticall day, id eſt, a day which giueth iudgment of ſickneſſes, in her owne houſe which is Cancer, or her exaltation, which is Taurus, or with Iupiter or Venus, ſhee indicateth a good Criſis to come: if ſhee apply to Saturne, Mars, or the Dragons tayle, they ſay contrary: likewiſe if the Moone be in via combuſta, which is from the midſt of Libra vnto the midſt of Scorpio, or vnder the Sunne beames, and decreaſing in light or motion, the Phyſitians ſay, it threatneth death: if the moone be Diametrall, nigh to the Sunne, within 12 degrees, it denoteth death, and the nearer to the Sunne, and in combuſtion, the worſe. Theſe mutations whether they tend to better or worſe, is diſcerned from the proper affection of the ſignificator whereby hee is afflicted and troubled, & from the ſigne which the ſame poſſeſſeth, and from his conſiguration with other Planets, fortunate or infortunate. As in the time of ones Criſis, the Moone be found in a ſigne agreeable to her qualitie and condition, in reſpect of the nature of the matter, ſickneſſe, and action, ſhee ſheweth the ſtrengthning and helpe of nature, and expelling of the ſickneſſe, ſo they affirme the alteration to bee, euen as the ſignificator is well or euill affected, alſo the ſignification to be more or leſſe, and the force or efficacy of the ſickneſſe to bee ſtronger or weaker in ſtriuing with nature.

The vſe of this Table is thus: The day and houre knowne in which the ſicke perſon tooke his ſickneſſe or the firſt queſtion made for the ſicke, you muſt ſearch the ſigne and degree, or rather the neereſt degree that the moone is in, in my Almanacke, which being found according to the moneth and day, enter it into my precedent Table, where you ſhall finde the whole Zodiaque diuided into 12 ſignes, and the ſignes againe into numbers of degrees, in the three vnmoueable columnes

lummes: Then lying the Apex of the Index or volvell (running vpon the Center or middle of the Table, with the character of the ☽ vpon it) to the day and degree of the signe, that the moone was in when the Patient first felt his sickenesse, or first question for the sicke: And then louing Reader, thou hast all thy desire performed before thy face at one sight. facile fieri.

Example.

THe 8. day of January, this present yeere 1623. suppose a certaine Patient fell sicke at a 11. of the cloche before noone (or then a question being moued for the sicke) the moone being then in the 19. degree of Leo, at that time, as you shall find in the 4. Columne of my Almanacke with a ☍ aspect vnto ♂ this yeere: now I desire to know the Crisis of the Patient (or the conflict of nature and his sicknesse) euen that day which is commonly the very best or worst in all the while of his sicknesse: so likewise the Indicatiue dayes, whereby the sicknesse is shewed. Now you must note that this Table doth represent euery moone in the yeere, which is in length 29 dayes, 12. houres, and 44. minutes. Now being initium morbi, with Character of the ☽ and Roex of the volvell, to the 19 degree of Leo, in the precedent Table, and it sheweth you before your eyes, fixing it there with a little waxe, and in the inner columne of the Table, pointing you to the 19. of Libra the 12. day of January, in the after noone, the 19. degree of Capricorne, the 19. day of January, in the morning, the 19 of Aries, the 26. day in the morning, the 19. degree of Cancer, iust at noone, the 2. of February. All these are Indicatiue or Iudiciall dayes. The dayes of his Crisis, are when the moone shall come to the 19. degree of Scorpio, which is the 15. day of January, at 2. a clocke in the morning, with △ of ♄ and the ☽, indicating a good Crisis to health: His next day of Crisis is when the moone comes to the 19. degree of Aquarius, the 21. day of January in the morning, the 19. degree of Taurus, the 28. day of January, at noone: the 19. degree of Leo, the 4. of February, at 6. at night: and so vnto the yeeres ende, if nature bee. But remember this, that the will of the sole efficient cause be looked at in this, and in all else.

Trini-vni Deo Gloria.

God saue our gracious King *Iames.*

FINIS.
